Basic Operations (continued)

Setting date and time:

- 1). Connect the flashlight to your computer, the storage card is recognized as a removable disk on your computer.
- 2). A sample file **Time.txt** is included in the product CD-ROM, copy this file and paste it into the root of the removable disk. Open the file, correct the date

Settings

and time, and then save.

3). Unplug the flashlight from the computer.

4). Firmly press button to turn your flashlight on, the new date and time is updated.

Fault reset:

When a fault occurs, you can try the reset function to solve the fault. The Reset button is inside the Reset hole. Use a needle (or a toothpick) insert into the reset hole to press the Reset button once.

1) To avoid data lose or malfunction, do not connect the flashlight to your computer when it is on recording status.

2) The product is not waterproof type. Water may cause trouble for the product.

3) Besides that the cover glass can be opened by triangle opener, never attempt to open the other parts or remove any internal components. Doing so can potentially damage the flashlight and void the warranty.
